EDUCATION

Boston University Master's of Science (M.S) - Computer Science • Coursework: Software Engineering, Agile, Analysis of Algorithms, Data Visualization and Analytics, Database Management.	Boston, MA Dec 2023
Anna University Bachelor's of Technology (B.Tech) - Information Technology • Coursework: Data Structures, Algorithms, OS, Machine Learning, Computer Networks, Statistics, Deep Learning, Cloud.	Chennai, India Aug 2017 - Jul 2021

WORK EXPERIENCE

Stealth Startup (PosterosAI) <i>Founding Software Engineer</i> • First employee and founding team member —Secured \$625 K seed-extension by scoping green-field React + .NET Core modules (calendar, email sync, analytics), managing offshore scrum, and presenting board-ready decks. • Engineered AI-powered voice assistant to surfaces user-based insights during live calls, slashing MSL/HCP admin time 30 %. • Orchestrated GenAI platform: built a WebSocket broker that spins up task-specific LLM assistants (OpenAI, Gemini, Claude) with live model-switching; cut response latency 15× vs. legacy REST calls. • Re-engineered analytics—migrated PL/SQL code to JavaScript MLE & Python ETL, unlocking real-time revenue dashboards.	Boston, MA Sep 2024 - Present
YourPassion1st <i>Technology Consultant (Volunteer)</i> • Directed 10-dev squad to deliver a React-Native app connecting 3 K+ youths with mentors; defined backlog, code-reviewed PRs, and enforced CI lint/test gates. • Developed automated ETL solutions for Trello, Salesforce, and local databases, boosting data flow efficiency by 75%.	Chicago, IL Mar 2024 - Present
Extreme Networks <i>Software Engineering Intern (Runner-up - Best Intern Award)</i> • Automated regression triage with a Flask + Python async service—shrunk test re-queue time from 2 hrs → 15 min. • Shipped telemetry ETL & React dashboard that replaced Excel reports and saved hardware team 9 hrs/week.	Cary, NC May 2023 - Aug 2023
Solarillion Foundation <i>Research Assistant</i> • Authored 3 IEEE Edge-AI anomaly-detection papers—Bonsai wearable-health, multithreaded YOLO vision, lightweight sensor-fusion—achieving 93 % F1 SOTA; open-source toolkit now cited 10 + times and forked widely.	Chennai, India Jun 2019 - Aug 2022

PROJECTS

Mentor Connect [React-Native, .NET Core, gRPC/Ocelot, AKS, Docker, GitHub Actions] • Developed marketplace application that matches homeowners with local service pros; designed React-Native app and .NET Core to handle real-time job posts, bidding, and chat—onboarding 200 + service pros in closed beta at 99.9 % uptime. • Dockerized and deployed to Azure AKS with auto-scaling; wired GitHub Actions for blue-green CI/CD, shrinking release cycle from hours to <10 min.	May 2024 - Present
LLM integrations [Python, Javascript, SQL, LiteLLM, OpenAI, Websockets, WRTC] • Unified multi-vendor LLM access by building a LiteLLM gateway that hot-swaps Anthropic, OpenAI, Grok, and Gemini models at runtime; trimmed average inference latency 4 × and lets Product A/B-test prompts without redeloys. • Re-engineered streaming layer with OpenAI Realtime WebSockets + WRTC, cutting first-token time 6 ×.	Dec 2024 - Present
O365 Application integration using GraphAPI [Oracle Apex, PL/SQL, Javascript MLE, GraphAPI, Azure] • Spearheaded app registration in the Azure portal and engineered a comprehensive Oracle Apex package—with functions, procedures, and RESTful services -to integrate O365 applications, thus migrating all O365 applications into core platform.	Nov 2024 - Dec 2024

SKILLS

- **Languages:** Python, TypeScript/Javascript, C#/.NET, C++, PL/SQL.
- **Front End:** React-Native, React.js, Astro, Tailwind, HTML/CSS.
- **Back End & APIs:** .NET Core, Node.js (Express/Fastify), Flask, gRPC, REST, WebSockets.
- **GenAI / LLM Ops:** OpenAI & Anthropic APIs, LiteLLM router, RAG, prompt design, streaming via WRTC, OpenAI WebSockets.
- **Data & Cloud:** SQL, Snowflake, MongoDB, Kafka, Azure (AKS, AD/Entra), AWS (S3, ECS, Lambda, Amplify).
- **DevOps / CI-CD:** Docker, GitHub Actions, dbt, Power BI, xUnit, PyTest.
